a Input: 2,048 points

b SA1: 128 anchors + grouping

c SA2: 32 anchors

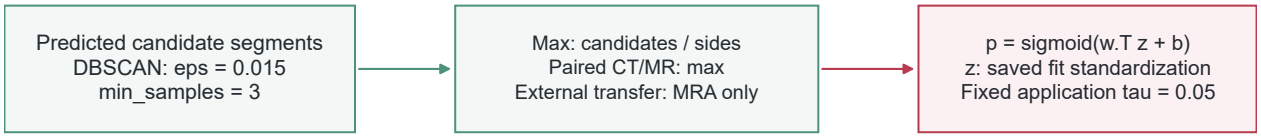

d Frozen hierarchical representation and saved readout

FullInformationPP shares native path-distance information across its information-matched controls.

e Candidate-to-patient presence decision and execution

If presence evidence falls below the saved threshold:

block Pcom labels 8/9 or third-A2 label 15; reassign only affected argmax predictions.

Candidate generation and geometric neighborhoods are different operations. Spatial proximity is not vessel connectivity.
